←  Certificate Import Wizard

Welcome to the Certificate Import Wizard

This wizard helps you copy certificates, certificate trust lists, and certificate revocation lists from your disk to a certificate store.

A certificate, which is issued by a certification authority, is a confirmation of your identity and contains information used to protect data or to establish secure network connections. A certificate store is the system area where certificates are kept.

The screenshot shows the 'File to Import' step of the Certificate Import Wizard. At the top right, there are 'Next' and 'Cancel' buttons. The window title bar shows 'Certificate Import Wizard'. Below the title bar, the text 'File to Import' is followed by the instruction 'Specify the file you want to import.' A horizontal line separates this from the input area. The 'File name:' label is above a text box containing 'D:\Desktop\primer.pfx'. To the right of the text box is a 'Browse...' button. Below the input area, a 'Note' states: 'More than one certificate can be stored in a single file in the following formats: Personal Information Exchange- PKCS #12 (.PFX,.P12), Cryptographic Message Syntax Standard- PKCS #7 Certificates (.P7B), and Microsoft Serialized Certificate Store (.SST)'. At the bottom right, there are 'Next' and 'Cancel' buttons.

Private key protection

To maintain security, the private key was protected with a password.

Type the password for the private key.

Password:

Display Password

Import options:

- Enable strong private key protection. You will be prompted every time the private key is used by an application if you enable this option.
- Mark this key as exportable. This will allow you to back up or transport your keys at a later time.
- Protect private key using virtualized-based security(Non-exportable)
- Include all extended properties.
