

## UČNI NAČRT PREDMETA/COURSE SYLLABUS

<b>Predmet:</b>	Analiza sedimentacijskih okolij
<b>Course title:</b>	Sedimentary Environments

Študijski programi in stopnja	Študijska smer	Letnik	Semestri
Geologija, druga stopnja, magistrski	Ni členitve (študijski program)	1. letnik	Zimski

Univerzitetna koda predmeta/University course code:

717

Predavanja	Seminar	Vaje	Klinične vaje	Druge oblike študija	Samostojno delo	ECTS
60	30	30	0	30	150	10

Nosilec predmeta/Lecturer:

Andrej Šmuc

Vrsta predmeta/Course type:

Obvezni / Compulsory

Jeziki/Languages:	Predavanja/Lectures:	Angleščina, Slovenščina
	Vaje/Tutorial:	Angleščina, Slovenščina

**Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:**

**Prerequisites:**

Osnovno znanje geologije, sedimentologije, strukturne geologije in tektonike in stratigrafije pridobljeno na dodiplomskem študiju. Obveznosti študenta: Študent mora redno obiskovati vaje, oddati vse zahtevane samostojne naloge ter opraviti preizkus teoretičnega in praktičnega znanja.	Basic knowledge of geology, sedimentology, structural geology and tectonics and stratigraphy acquired at the undergraduate level. The student must regularly attend excercises and submit all required tasks and pass the test of theoretical and practical knowledge.

**Cilji in kompetence:**

**CILJI:** Cilj predmeta je študente seznaniti z različnimi sedimentnimi okolji, procesi, ki se v njih odvijajo ter z dinamiko nastajanja sedimentov. Cilj predmeta je tako spoznavanje in interpretacija različnih sedimentnih zaporedij, značilnih za posamezna okolja ter spoznavanje njihove odvisnosti od lokalnih in globalnih tetkonskih procesov ter klimatskih in bioloških sprememb.

**KOMPETENCE:** Sedimentne kamnine predstavljajo najpogosteje kamine, ki jih najdemo na zemeljsnem površju. V Sloveniji sedimente kamnine pokrivajo 90% površine, tako da se z njimi v svoji poklicni karieri sreča vsak geolog. Nekdanja sedimentacijska okolja, v katerih so omenjene kamine nastajale, rekonstruiramo najprej preko interpretacije procesa ali procesov, ki so povzročili nastanek določenega tipa sedimentov ter v naslednjem koraku preko interpretacije okolja v katerem so ti procesi potekali. Sedimentacijska okolja v katerih nastajajo kamine so izredno raznolika prav tako pa so raznoliki tudi faktorji, ki vplivajo na sedimentacijo. Sedimentacija v določenem okolju se namreč pojavi kot posledica interakcije med dotokom sedimenta, njegove predelave in modificiranje preko fizikalnih, kemikalnih in bioloških procesov ter akomodacijskega prostora. Poznavanje recentnih in nekdanjih sedimentnih okolij, procesov, ki v njih delujejo ter sedimentnih zaporedij, ki so značilna za posamezna okolja je tako bistveno za vse geološke stroke.

**Objectives and competences:**

**OBJECTIVES:** The aim of the course is to acquaint students with different sedimentary environments, processes that take place in them, and the dynamics of sedimentation. The aim of the course is understanding and interpretation of various sedimentary sequences specific to each environment and recognition of local and global tectonic processes and climatic and biological changes that took place in them.

**COMPETENCES:** Sedimentary rocks represent the most common rocks which can be found on the Earth's surface. In Slovenia sediment rocks cover 90% of the surface. Former sedimentary environments in which these rocks were formed are reconstructed first in the view of processes that have led to the deposition of sediments, and in the next step over the interpretation of the environment in which these processes take place. Sedimentary environments are very diverse as well as factors affecting the sedimentation. Sedimentation in a particular environment does occur as a result of interaction between the incoming sediment, its processing and modification via physical, chemical and biological processes and accommodation space. Knowledge of recent and past sedimentary environments, processes that are active in them, and of sedimentary sequences, which are specific to each environment is essential for all geological profession.

**Predvideni študijski rezultati:**

Študent spozna različna sedimentacijska okolja in razume procese, ki delujejo v njih. Na podlagi sedimentnih zaporedij zna interpretirati okolja nastanka in dinamiko zapolnjevanja. S pomočjo poznавanja vzrokov sprememb v sedimentaciji razume spremembe regionalnih in lokalnih geoloških procesov in stanj. Zna izbrati in uporabiti ustrezne analitske tehnike ter ustrezno obdelavo podatkov.

**Intended learning outcomes:**

Student learns different sedimentary environments and understand the processes operating in them. Based on the sedimentary sequences he or she can interpret environment origin and dynamics of sedimentation. With knowledge of the causes of changes in the sedimentation she or he understand changes in the regional and local geological processes. She can select and use appropriate analytical techniques and appropriate data processing.

**Metode poučevanja in učenja:**

Predavanja z uporabo prezentacij.  
Izdelava seminarja na izbrano tematiko in njegova javna predstavitev  
Vaje potekajo kot vodene kabinetne vaje (30 ur)  
Terenske vaje obsegajo 3 dni dela na terenu.

**Learning and teaching methods:**

Lectures by using the presentations.  
Creating a seminar on a selected topic and its public presentation  
Exercises will take place as a cabinet-guided exercises (30 hours)  
Field activities include three days of field work.

**Načini ocenjevanja:****Delež/Weight****Assessment:**

Izdelava in predstavitev seminarja	30,00 %	Preparation and presentation of seminar
Pisni izpit	70,00 %	Written exam
Za pozitivno oceno mora biti pravilno rešenih najmanj 50% teoretičnih vprašanj.		The positive assessment must be properly resolved, at least 50% of the theoretical issues.
