

UČNI NAČRT PREDMETA/COURSE SYLLABUS

Predmet:	Sedimentna petrologija
Course title:	Sedimentary Petrology

Študijski programi in stopnja	Študijska smer	Letnik	Semestri
Geologija, prva stopnja, univerzitetni	Ni členitve (študijski program)	2. letnik	Zimski

Univerzitetna koda predmeta/University course code:

957

Predavanja	Seminar	Vaje	Klinične vaje	Druge oblike študija	Samostojno delo	ECTS
45	0	30	0	30	105	7

Nosilec predmeta/Lecturer:

Andrej Šmuc, Mirijam Vrabec

Vrsta predmeta/Course type:

Obvezni / Compulsory

Jeziki/Languages:	Predavanja/Lectures:	Angleščina, Slovenščina
	Vaje/Tutorial:	Angleščina, Slovenščina

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Pogoji za vključitev v delo je vpis v 2. letnik študija geologije ter obvezno opravljeni izpiti iz Osnov geologije, Paleontologije, Kristalografije in Mineralogije za pristop k izpitu.	Condition for inclusion in the work is inscription to the 2nd academic year, and passed exams in Introduction to Geology, Paleontology, Crystallography and Mineralogy to take an exam.
--	---

Vsebina:	Content (Syllabus outline):
Uvod v sedimentno petrologijo Izvor, klasifikacija in nastopanje sedimentnih kamnin Struktura sedimentnih kmnin Tekstura sedimentnih kmnin Siliciklastične sedimentne kamnine: - sestava in klasifikacija: konglomerati, peščenjaki, muljevci in glinavci - diageneza in poroznost - provenienca siliciklastičnih sedimentnih kmnin Karbonatne sedimentne kamnine - sestava in klasifikacija: apnenci, dolomiti - diageneza apnencov - dolomitizacija in dolomiti Karbonatni klastiti Druge kemične/biokemične sedimentne kamnine in organske sedimentne kamnine: evaporiti, roženci, železove sedimentne kamnine, fosforiti in organske sedimentne kamnine Vulkanoklastične kamnine: nastanek, klasifikacija in diageneza	Introduction to sedimentary petrology Origin, classification, and occurrence of sedimentary rocks Sedimentary texture Sedimentary structure Siliciclastic sedimentary rocks: - composition and classification: conglomerates, sandstones, mudstones and shales - diagenesis and porosity - provenance of siliciclastic sedimentary rocks Carbonate sedimentary rocks - composition and classification: limestones, dolomites - diagenesis of limestones - dolomitization and dolomites Carbonate clastic rocks Other chemical/biochemical sedimentary rocks and carbonaceous sedimentary rocks: evaporites, cherts, iron-rich sedimentary rocks, phosphorites and carbonaceous sedimentary rocks Volcaniclastic rocks: origin, classification and diagenesis

Cilji in kompetence:

CILJI: Spoznavanje procesov nastanka, sestave ter strukturnih in teksturnih značilnostih vseh sedimentnih kamnin.
KOMPETENCE: Študent zna prepoznati vse vrste sedimentnih kamnin. Usposobljen je za samostojno terensko delo, zna na izdanku in vrtini popisati vse lastnosti sedimentnih kamnin. Na podlagi terenskih in laboratorijskih raziskav je sposoben identificirati in interpretirati sedimetacijske in diagenetske procese nastanka sedimentnih kamnin.

Objectives and competences:

OBJECTIVES: Students get familiar with the processes of origin, occurrence, composition, and structural and textural characteristics of sedimentary rocks.
COMPETENCES: Students can recognize all kinds of sedimentary rock. Students are qualified for independent fieldwork, and knows how to profile and list all necessary properties of sedimentary rocks on an outcrop or borehole. On the basis of field and laboratory research students are able to identify and interpret sedimentary and diagenetic processes of sedimentary rocks.

Predvideni študijski rezultati:

Študent spozna, osvoji in razume osnovno sedimentološko terminologijo in metode proučevanja sedimentov in sedimentnih kamnin, prepozna vse vrste sedimentnih kamnin ter pridobi osnove makroskopske in mikroskopske analize sedimentnih kamnin za interpretacijo sedimentacijskih in postsedimentacijskih procesov.

Intended learning outcomes:

Students learn, understand and conquer basic sedimentological terminology and methods for studying sediments and sedimentary rocks. Students are able to identify all types of sedimentary rocks, and learn the basics of macroscopic and microscopic analysis of sedimentary rocks necessary for the interpretation of sedimentary and postsedimentary processes.

Metode poučevanja in učenja:

Predavanja, vaje v mikroskopirnici in predavalnici (mikroskopiranje preparatov najbolj tipičnih sedimentnih kamnin in njihovo makroskopsko prepoznavanje), 4 dni terenskega dela. V okviru terenskih vaj študenti izdajo terensko poročilo.

Learning and teaching methods:

Lectures, practical work in the microscope laboratory and classroom (microscopy of most typical sedimentary rocks in thinsections), 4 days of fieldwork. Within the fieldwork students will prepare fieldwork report.

Načini ocenjevanja:

	Delež/Weight	Assessment:
Pisni izpit ali oddane domače naloge	60,00 %	Written exam or given homework
Ustno preverjanje mikroskopskega in makroskopskega prepoznavanja kamnin	25,00 %	Oral exam of microscopic and macroscopic identification of rocks
Poročilo terenskega dela	10,00 %	Fieldwork report
Aktivno sodelovanje pri predavanjih	5,00 %	Active participation in lectures
