Selecting External Optional Courses

The entire postgraduate study programme in Materials and Metallurgy includes optional course worth 12 ECTS (or 10% of those provided). The student may choose optional courses offered by other study programmes at the NTF, those offered by other members of the University of Ljubljana and those offered by other universities in Slovenia and abroad with which the UL has or will have agreements on recognizing the credit-point study system; student may also choose optional courses from the professional courses listed in the Professional Optional Courses Table for the Second-Level UN Study Programme.

Mobility

Students have the possibility of transferring 30 ECTS (or one study semester) from another programme at another university or higher education establishment with which the UL has or will have an agreement on recognising the credit study system. The recognised 30 ECTS may either come from obligatory courses or optional courses. The study programme at another university must cover the same fields as Materials and Metallurgy. The recognition applications will be reviewed individually and according to the procedure set out in the Statutes of the UL and the NTF Rules.
