# **General information about the doctoral program**

The doctoral program Textile Engineering, Graphic Communication and Textile Design lasts 3 years, and consists of 180 ECTS credits under the European Credit Transfer System (ECTS).

The contents of the program cover different fields of textile engineering, graphic and interactive communications and textile design, which are sensibly complementary.

Study field at ISCED classification: (21) arts; (54) production technology.

Classification of the study program at KLASIUS-P:

- Textile engineering: (5420) Textile, apparel, footwear and leather industry (for details Specified)
- Graphic and interactive communications: (2130) Audiovisual techniques and (multi) media production (for details Specified)
- Textile Design: (2143) Textile and Fashion Design (Fashion Design).

Classification of the study program at KLASIUS SRV: (18202) Doctoral Education (third Bologna level)

Scientific research discipline at Frascati classification: engineering; humanities

Scientific title: Doctor of Science

The doctoral program is organised and run by the Department of Textiles at the Faculty of Natural Sciences and Engineering at the University of Ljubljana.

## **■ Goals and general competences of the program**

The aim of the doctoral study programme is to qualify the post-graduate students to gain the following general competences:

- In-depth understanding theoretical and methodological concepts in the area of textiles, graphic and interactive communications and theory of textile design.
- The capability to independently develop a new knowledge in the area of textiles, graphic and interactive communications and theory of textile design.
- The capability to solve the most complex problems by testing and improving the already known solutions and by discovering new solutions in the area of textiles, graphic and interactive communications and theory of textile design.
- The ability to manage the most complex work systems in the area of textiles, graphic and interactive communications and theory of textile design.
- The ability to manage scientific and research projects in the area of textiles, graphic and interactive communications and theory of textile design from a broad professional and/or scientific area.
- A developed critical reflection in the area of textiles, graphic and interactive communications and theory of textile design.
- Social and communication capabilities to lead teamwork even in the case of the projects based on integration of scientific principles of various sectors.
- A developed professional, ethical and environmental responsibility.
- The ability to use modern tools, skills and competences especially in the area of IKT technologies in everyday professional as well as scientific and research work.

## **Data on international cooperation of the higher education institution**

The Department of Textiles cooperates with important European and other universities worldwide in the educational and research field. Mobility of students, teachers and researchers is performed mainly within the CUMULUS and CEEPUS networks and within the Socrates Erasmus programme framework.

The Department of Textiles has signed mobility agreements for undergraduate and postgraduate students, teachers and staff with the following institutions:

Country	Partner Institution (Erasmus ID)
Belgium	Arteveldehogeschool (B GENT39) Universiteit Gent (B GENT01)
Croatia	University of Zagreb, Faculty of Graphic Arts (HR ZAGREB01) University of Zagreb, Faculty of Textile Technology (HR ZAGREB01)
Czech Republic	University of Pardubice, Department of Graphic Arts and Photophysics (CZ PARDUB01) Brno University of Technology, Faculty of Chemistry (CZ BRNO01) Technical University of Liberec (CZ LIBEREC01)
Denmark	Desigenskolen Kolding (DK KOLDING07)
Estonia	Estonian Academy of Arts (EE TALLINN01)
Finland	Aalto University, School of Arts, Design and Architecture SF (ESPOO12) Wetterhoff Institute – HAMK (SF HAMEEN09)
France	Universite de Haute Alsace, Ecole nationale superieure d'ingeneurs sud alsace (F MULHOUS 01)
Germany	Folkwang Essen (D ESSEN02) Fachhochschule Köln (D KOLN04) Hochschule der Medien Stuttgart (D STUTTGA06) Hochschule Niederrhein – Krefeld (D KREFELD01)
Great Britain	Leeds college of art (UK LEEDS05) University of Salford, School of Arts and Media (UK SALFORD01) University of Southampton, Winchester School of Art (UK SAUTHAMP01)
Greece	Technological Educational Institute (T.E.I.) of Athens (G ATHINE34)
Hungary	Obuda University, Faculty of Light Industry and Environmental Protection Engineering (HU BUDAPEST16) Moholy –Nagy University of art and design Budapest (HU BUDAPEST27)

<b>Country</b>	<b>Partner Institution (Erasmus ID)</b>
Iceland	Iceland Academy of the Arts (IS REYKJAV06)
Lithuania	Vilnius Academy of Arts (LT VILNUS11)
Poland	Academy of Fine Arts In Lodz (PL LODZ05) Akademia Sztuk Pięknych I.m. Jana Matejki W. Krakowie (PL KRAKOW10) Jan Kochanowski University in Kielce (PL KIELCE02) Politechnika Warszawska (PL WARSZAW02) Tecnical University of Lodz (PL LODZ02)
Portugal	Instituto Politecnico de Tomar (PT TOMAR 01) Esad-Escola Superior de Artes e Design (P MATOSIN01) IADE Instituto de Artes Visuais, Design e Marketing (P LISBOA64) Instituto Politecnico del Castelo Branco (P CASTELO01) Universidade de Lisboa, Faculdade de Arquitectura (P LISBOA04) Universidade de Lisboa, Faculdade de Belas Artes (P LISBOA109)
Romania	Gheorge Assachi Technical University Iasi (RO ISAI05)
Spain	Universidad de Granada, Facultad de Ciencias (E GRANADA01) Universitat Politècnica de Valencia, Facultad de Bellas Artes (BBAA) Valencia (E VALENCI02) School of Higher Studies of Design, Valencia-EASD (E VALENCI13)
Sweden	Akademien Valand, Göteborgs Universitet (S GOTEBOR01) University of Boras, The Swedish School of Textiles (S BORAS 01) University of Gothenburg (S GOTEBOR01)
Switzerland	Bern University of the Arts (CH BERN11) Bern University of Applied Sciences (CH BERN11) Zürcher Hochschule der Künste (CH ZURICH20)
Turkey	Marmara Üniversitesi (TR ISTANBU05) Ege University – Izmir (TR IZMIR02) Istanbul Technical University (TR ISTANBU04) Namik Kemal University – Tekirdag (TR TEKIRDA01) Usak University (TR USAK01)

Universities cooperating as partners in CEEPUS network in the program Research and Education in the Field of Graphic Engineering and Design (CIII-RS-0704-00-1415):

<b>Country</b>	<b>Partner Institution</b>
Bulgaria	University of Chemical Technology and Metallurgy, Department of Printing Arts, Pulp and Paper
Bosnia and Herzegovina	University of Banja Luka, Faculty of Technology
Croatia	University of Zagreb, Faculty of Graphic Arts
Czech Republic	University of Pardubice, Faculty of Chemical Technology
Hungary	Óbuda University, Budapest, Rejto Sándor Faculty of Light Industry Engineering
Poland	Technical University of Lódz, Faculty of Textile Engineering and Marketing Warsaw University of Technology, Department of Printing Technology
Romania	Politehnica University of Timisoara, Faculty of Engineering Hunedoara
Serbia	University of Novi Sad, Faculty of Technical Sciences
Slovakia	Slovak University of Technology, Institute of Natural and Synthetic Polymers, Graphic Arts Technology and Photography

Other universities where lecturers have been working as invited professors  
or researchers:

<b>Country</b>	<b>Partner Institution</b>
Bosnia and Herzegovina	University of Banja Luka, Faculty of Technology
Croatia	University of Zagreb, Faculty of Graphic Arts University of Zagreb, Faculty of Textile Technology
Great Britain	British Council London College of Art and Design London College of Fashion, Centre for Sustainable Fashion University of Art and Design Winchester University of Leeds, School of Design
Hungary	Óbuda University, Budapest, Rejto Sándor Faculty of Light Industry Engineering Moholy-Nagy University of Art and Design Budapest
Poland	Academy of Fine Arts in Cracow
Slovakia	Academy of Fine Arts and Design Bratislava
USA	Parsons the New School for Design

The Department of Textiles is a member of international associations in the field of textile, graphic and communication technologies and education, i.e. Autex, Cumulus, IFTK, IARIGAI, IC, InPEQ and EFPRO.

# **■ Information on research projects and agreements**

Lecturers in the doctoral program Textile Engineering, Graphic Communication and Textile Design are involved in different ongoing national and international scientific and artistic projects.

Scientific research work is conducted within 12 national research programmes (P2-0213 is coordinated by the Department of Textiles) financed by the Slovenian Research Agency (ARRS), 9 basic and applied projects funded by the ARRS, 3 projects of the ministries of other countries, 7 EU projects and 5 bilateral projects.

## **Programmes financed by ARRS**

P1-0230	Organic Chemistry: Synthesis, Structure, and Application, 1. 1. 2009–31. 12. 2020
P2-0082	ankThin-film structures and plasma surface engineering, 1. 1. 2004–31. 12. 2020
P2-0205	Synthesis and Characterization of Materials, 1. 1. 1999–31. 12. 2019
P2-0213	Textiles and Ecology, 1. 1. 1999–31. 12. 2019
P2-0246	Algorithms and optimization methods in telecommunications, 1. 1. 2004–31. 12. 2014
P2-0263	Mechanics in Engineering, 1. 1. 1999–31. 12. 2014
P2-0270	Production systems, laser technologies and materials welding, 1. 1. 2004–31. 12. 2014
P2-0393	Advanced materials for low-carbon and sustainable society, 1. 1. 2015–31. 12. 20120
P5-0183	Social psychology and Sociology of Everyday Life, 1. 1. 2009–31. 12. 2016
P5-0203	The production of meaning and knowledge in a time of crisis: cultural, religious and scientific-developmental aspects of societies in Slovenia, the Balkans, Europe, 1. 1. 1999–31. 12. 2018
P5-0051	Mass media, the public sphere and social changes, 1. 1. 1999–31. 12. 2014
P6-0341	Humanistika in smisel humanosti v vidikih zgodovinskosti in sodobnosti (Slovene), 1. 7. 2006–31. 12. 2014

## **Projects financed by ARRS**

J5-5540	Sexuality in Secondary-school Students in Slovenia: behaviour, health and attitudes, 1. 1. 2013–31. 7. 2016
J5-5535	Development of information literacy of university students as a support for solving authentical science problems, 1. 8. 2013–31. 7. 2016

L1-5453	Development of novel bioresistant and stainfree stone surfaces, 1. 1. 2013–31. 7. 2016
L2-5486	Biomedical shape memory alloys, 1. 8. 2013–31. 7. 2016
L2-5492	Development of the functional textiles used for the treatment of diabetic foot (malum perforans), 1. 4. 2013–31. 7. 2016
L2-5571	New materials for printed sensors and indicators and their integration in smart printed matter, 1. 8. 2013–31. 7. 2016
L2-6767	Interakcija popolnoma disociirane zmerno ionizirane plazme amoniaka s steklo-polimernimi kompoziti (Slovene), 1. 7. 2014–30. 6. 2017
L7-6782	Funkcionalizacija polimernih kardiovaskularnih vsadkov za optimizacijo hemokompatibilnosti (Slovene), 1. 7. 2014–30. 6. 2017
L7-6858	DriveGreen: Razvoj aplikacije za spodbujanje eko-vožnje pri prehodu v nizkoogljično družbo (Slovene), 1. 7. 2014–30. 6. 2017

## Projects of other ministries

- 2221 – Fellowships for Visiting Scientists and Scientists on Sabbatical Leave. Project title: Computer modelling and simulation of e-transmition lines manufacturing with hot air welding technologies. Istanbul technical University, Faculty of Textile Technologies and design, Istanbul, Turkey, 2014–2015
- 2221 – Visiting Fellowships for Scientists and Scientists on Sabbatical Leave. Project title: Computer modelling and simulation of e-manufacturing transmition lines with hot air welding technologies. Istanbul Technical University, Faculty of Textile Technologies and Design, Istanbul, Turkey, 2014–2015
- Antimicrobial finishing and ecological acceptable printing of textile materials for sportswear and the control of their thermal properties “ University of Banja Luka, Faculty of Technology, Banja Luka, 2014–2015
- PercieveRecognize R989 – Application for IKT – aided integration of blind and visually impaired youth in the society, Ministry of Education Science and Spotr, Project of structural founds, 2015

## EU and other international projects

- Erasmus+ Programme: Knowledge Alliance; TECLO: Future textile and clothing managers for export, marketing, innovation, sustainability and entrepreneurship oriented companies, 1. 12. 2014–30. 11. 2016
- Erasmus+ Programme, ADVA2TEX, 2015–2016
- Horizon 2020 - Research and Innovation Framework Programme: eTexWeld- Welding of E-Textiles for Interactive Clothing, 644268, Marie Curie, 2015–2017
- MPNS COST Action MP1101, Biomedical Applications of Atmospheric Pressure Plasma Technology, 2013–2015

- MPNS COST Action MP1105, FLARETEX, Sustainable flame retardancy for textiles and related materials based on nanoparticles substituting conventional chemicals, 2012–2016
- FPS COST Action FP1104, “New possibilities for print media and packaging - combining print with digital bio-based materials for new packaging applications”, 2012–2016
- FPS COST Action FP1405, Active and intelligent fibre-based packaging – innovation and market introduction, 2014–2018

## **Bilateral projects**

- |                 |   |
|-----------------|---|
| BI-RS/14-15-018 | Development of a method for using commercial digital camera as color measurement device, (Serbia), 2014–2015  |
| BI-RS/14-15-033 | Tailoring innovative functional textiles using plasma and microcapsules, (Serbia), 2014–2015  |
| BI-HR/14-15-027 | Modification of textiles by plasma and nanoparticles for development of protective and healthcare textiles, (Croatia), 2014–2015  |
| BI-RU/14-15-037 | Spatial structure of the polymer systems on the base of the porous volume (hydrogels) and two-scale (films) matrices, their functional and mechanical properties, (Russia), 2014–2015 |
| BI-BA/14-15-033 | Investigation of the possibility using short flax fibers for a production of filters for a removal of heavy metals ion from aqueous solutions, (Banja Luka), 2014–2015.               |

Art research work of lecturers of doctoral program TGTO in 2014 and ongoing projects:

- Fashion Show Perpetuum, Fashion Week Ljubljana
- Days of graphics, Technical Museum of Slovenia, Polhov Gradec
- Collection of textile products Fabiani, House of Architecture, MOL
- Collection of clothing made from hemp, Fair Gornja Radgona
- Presentation of the collection Matica Velerja at The exhibition Dolce vita, Slovenian Ethnographic Museum Ljubljana
- Mitnica – exhibition of students' works
- Fabiani tribune
- Corporate Graphic Identity for Fabiani year
- Collection of clothing for NK Olimpija Ljubljana
- The collection of fashion accessories for NK Olimpija Ljubljana
- Collection of samples for NK Olimpija Ljubljana
- Development of two mascots for NK Olimpija Ljubljana
- Development of typefaces for NK Olimpija Ljubljana
- MLMGC, BIO 50 \_ Fashion System, MAO in KUD France Prešeren
- After-use, BIO 50: NOW, KUD France Prešeren
- After-use, Design Month

- Marking System for Park Postojna Cave, in collaboration with UL FA
- Image for Cultural Art Society KIKS
- Bridging the gap in the fonts for wooden letters for Institute tipoRenesansa
- Mouse Kiki fall into the pantry ... making of picture books in collaboration with Birografika Bori and Infokem s.p.
- Creating of Virtual and pop-up branch offices and mobile applications for counsellors, cooperation with NLB and Microsoft
- Different communication – a permanent exhibition of New Communications Solutions, Technical Museum of Slovenia, Polhov Gradec

## **■ Structure of the programme and mobility**

The programme consists of two main groups of courses:

- basic courses (T),
- elective courses (I).

Basic courses allot 10 ECTS, elective courses allot 5 or 10 ECTS.

Basic and elective courses are divided into two subgroups, i.e. general courses (S) which are related by content to all three research fields of the doctoral study Textile Engineering, Graphic Communication and Textile Design, and discipline-specific courses (P), which include the content specific for a particular research field.

In cooperation with the mentor and research field coordinator, the student selects courses from the set of basic courses (20 ECTS) and elective subjects (25 ECTS). In order to secure the research field, the student shall accumulate a minimum of 20 ECTS from discipline specific courses of which a minimum of 10 ECTS from basic discipline-specific courses and 10 ECTS from elective discipline-specific courses. The selection can be made among the set of courses of all scientific areas.

In cooperation with the mentor and research field coordinator, the student is able to accumulate 10 ECTS from the curriculum of other comparable programmes of Slovene and foreign universities which have the programmes evaluated by the ECTS system or other systems which enable the comparison of evaluation (generic skills).

Course Work organisation and procedures in science (UL, Faculty of Architecture) is obligatory for students on the field of textile design.

## **Lecturers of the courses and mentors**

Lecturers of the courses are university teachers (assistant professor, associate professor, full professor) with established scientific relevance for the course with suitable references (see page 43).

Mentor and co-mentor for the preparation of doctoral dissertation can be a person with a university teacher title (assistant professor, associate professor, full professor) or researcher title (research associate, senior researcher or higher research associate) and has proof of research activity with a relevant scientific bibliography in the field of the doctoral dissertation topic. Co-mentoring must be substantively justified.

Minimal research activity of mentor and co-mentor is proved by 100 bibliographic points according to the SICRIS database in the case of basic researches, and in the case of applicative researches 40 bibliographic points and proofs of the successful transfer of project results into practice.

The mentor and the co-mentor are confirmed in the process of registration and approval of the doctoral dissertation topic.

# Curriculum with a credit evaluation study obligations according to ECTS

1st year		Contact hours								
No.	Course unit	Lecturer	Lect.	Sem.	Tut.	Clinical tutorials	Other commit.	Indiv. work	Total hours	ECTS
	Basic courses	According to the selected course							600	20
	Elective courses	According to the selected course							300	10
	Individual research work	Mentor							900	30
<b>TOTAL</b>								<b>1800</b>	<b>1800</b>	<b>60</b>
SHARE										33.33%

2nd year		Contact hours

## **■ Enrollment spaces in the program, admission requirements and criteria for selection in the case of limited number of candidates**

The number of enrolment spaces is 10.

For admission to the doctoral programme Textile Engineering, Graphic Communication and Textile Design are invited graduates of the following programmes:

- second cycle study programmes;
- study programmes providing education for occupations regulated by Directives of the European Union, evaluated with at least 300 ECTS;
- academic study programmes (before 11. 6. 2004);
- study programmes leading to a master of science or to specialisation after completing an academic study programme; 60 ECTS of study obligations will be recognised to such candidates;
- study programmes leading to specialisation provided that candidates have previously completed a higher education professional study programme; for these candidates, additional entry requirements in individual areas amounting from 30 to 60 ECTS will be specified.

If the number of candidates applying for the programme exceeds the number of enrolment spaces, the candidates shall be selected according to their general success at their previous study as well as in the scientific and professional fields as follows:

- average mark of the exams of previous study (mark  $\times$  10 points),
- mark for the diploma thesis and its defence (mark  $\times$  3 points),
- a research paper evaluated by the criteria of the habilitation commission of the University of Ljubljana – proportional allocation of points is taken into account ((2 to 8)  $\times$  2 points),
- the Prešeren award at the University of Ljubljana – proportional allocation of points is taken into account (10 points),
- the Prešeren award at the faculty – proportional allocation of points is taken into account; if the same work is submitted as a diploma thesis, only half of the envisaged points shall be taken into account (6 points).

## **■ Recognition of knowledge and skills acquired prior to enrolment in the programme**

The knowledge, which has been acquired by the candidate through various types of study, will be recognized if the content of such study corresponds to the content of the courses included in the doctoral study programme Textile Engineering, Graphic Communication and Textile Design. Decisions on recognition of the knowledge and skills acquired prior to the enrolment in the programme shall be taken by the Studies Commission of the Faculty of Natural Sciences and Engineering on the basis of the candidate's written application, enclosed certificates and other documents which evidence the successfully acquired knowledge and the content of such knowledge.

In its decision-making the Studies Commission will take into account the following criteria:

- fulfilment of the conditions required to enrol in various types of study (required previous education for enrolment in the programme),
- the extent of the previous study (the number of hours of the previous study in comparison with the number of hours of the study in which the candidate is enrolling),
- suitability of the content of the previous study in comparison with the content of the study in which the student is enrolling.

The acquired knowledge can be recognized as the fulfilled obligation if the condition for enrolment corresponded to the conditions required for enrolment in the doctoral study programme consisting of the courses of textiles, graphic and interactive communications and theory of textile design, if the previous study encompassed at least 75% of the extent of the course, and if at least 75% of the content of the previous study correspond to the content of the course in which the candidate is enrolling. If the Commission establishes that the acquired knowledge may be recognized, the candidate's knowledge shall be evaluated with equal number of ECTS as the course in which the candidate is enrolling.

## **■ Grading method**

In accordance with the Statute of the University of Ljubljana, the level of knowledge of a student on the exam is graded with the marks 1 – 10 of which marks 6 – 10 are positive. The programme envisages written and oral exams; preparation and oral presentation of seminars will be graded as well.

Photo: Jure Ahtik

## **Conditions for advancing through programme**

To advance to the 2nd year of the doctoral study, the candidate shall meet the obligations, which allot him a minimum of 45 ECTS ECTS of which a minimum of 20 ECTS ECTS shall be accumulated from basic courses.

The students who have met all obligations of the organized study forms of the 1st and the 2nd year may advance to the 3rd year of the doctoral study.

The last, i.e. the 3rd year, is dedicated to individual research work and to writing and defending the doctoral thesis.

## **Transfer between programmes**

Transfer between study programmes is considered as discontinuation of the study in the third level study programme which the candidate has enrolled in, and continuation of the study in the doctoral study programme Textile Engineering, Graphic Communication and Textile Design.

The following criteria are taken into account for the transfer between programmes:

- fulfilment of the conditions for enrolment in the new study programme,
- the number of places available,
- the years or semesters in the previous study programme in which the candidate met
- all study obligations and which can be recognized in full,
- the minimum number of semesters the candidate will have to complete in order to take the doctor's degree in the new programme.

### **Transfer between the 3 level doctoral study programmes**

The students enrolled in the 3rd level doctoral study programmes in the field of textile science, graphic and interactive communications, natural sciences and mathematics, design, technical, humanistic and social sciences who meet the conditions for enrolment in the doctoral programme will receive the list of additional obligations which shall be met in order to take his/her doctor's degree in the new programme.

### **Transfer between the post-graduate studies and the third level doctoral study programme prior to the introduction of the Bologna Declaration**

The students in the post-graduate study programme at the NTF OT (the Faculty of Natural Sciences and Engineering, Department of Textiles) and the relative post-graduate study programmes (in the field of textile science, graphic and interactive communications, natural sciences and mathematics, design, technical, humanistic and social sciences) who were accredited prior to the enforcement of the Higher Education Act Amendment will receive the list of additional obligations which shall be complet-

ed in order to be able to take his/her doctor's degree in the new study programme. Decisions about transfers between the programmes shall be made by the Studies Commission of the Faculty of Natural Sciences and Engineering in accordance with the Statute of the University of Ljubljana, the Criteria for Transfer between Study Programmes and other regulations.

## **Mode od study**

The doctoral programme is carried out as full-time study.

## **Conditions for completion of study**

The student can complete the study and obtain the scientific title of doctor of science if he/she has successfully met all obligations set down in the programme and has successfully defended his/her doctoral thesis. The student must publish a minimum of one scientific paper dealing with the course-matter of his/her doctoral thesis, which is SCI, SSCI or A&HCI indexed. The author must be the first author of the paper. The paper must be received for publication prior to the defence of his/her doctoral thesis.

## **Employment possibilities**

The possibilities of employment of the students who have completed the doctoral study programme Textile Engineering, Graphic Communication and Textile Design are diverse. Future doctors of science will be able to work in a pedagogic and research area at the universities and research institutes, in textile, clothing, graphic, media and paper processing companies, publishing houses, advertising agencies and media companies, and even in the state administration, which employs the experts and researchers with the highest education.

## **■ Short presentation of courses and the list of potential mentors**

### **Short presentation of basic courses**

#### **T-S-1 MECHANICS - SELECTED TOPICS: 10 ECTS**

Lecturers ■ Igor Dobovšek (coordinator), Alojz Suhadolnik

The course enables the acquisition of the basic principles of analytical mechanics in conjunction with the mechanics of the continuum. Emphasis is placed on understanding the mechanical laws and the principles of mechanics of materials and the operation of devices. The aim of the course is to successfully solve various problems that occur in the areas of textile and graphics technology. The acquired knowledge prepares students for the development of complex models and treatment of typical problems in narrow fields of research rheology, mechanics of composite materials and mechanisms.

#### **T-S-2 PHYSICAL ORGANIC CHEMISTRY WITH MODERN METHODS OF SEPARATION AND IDENTIFICATION OF ORGANIC COMPOUNDS: 10 ECTS**

Lecturer ■ Janez Cerkovnik

Candidates are acquainted with the basics of physical organic chemistry, together with some modern methods for separation and structural characterization of organic materials. The course covers the following topics: chemical bonding, molecular structure and thermodynamics, stereochemical and conformational isomerism, molecular structure and reactivity, kinetics and reaction mechanisms in solution, mechanistic studies of selected organic reactions, acids and bases, and some modern methods for separation and identification of organic compounds.

#### **T-S-3 OPTICS, SPECTROSCOPY AND MICROSCOPY FOR GRAPHIC AND TEXTILE APPLICATIONS: 10 ECTS**

Lecturers ■ Marta Klanjšek Gunde (coordinator), Raša Urbas

The course covers selected topics of physics and chemistry, which enable the successful application of materials science for the of state-of-the-art applications, especially "functional" or "smart" examples. Attention will be paid on measurement equipment available from field to laboratory scale. The knowledge is of crucial importance for continuous development of graphic and textile applications with successful introduction of so-called "smart" applications and printed electronics.

#### **T-S-4 PRINCIPLES OF ELECTRONICS FOR APPLICATION IN PRINTED ELECTRONICS: 10 ECTS**

Lecturer ■ Marta Klanjšek Gunde

The course considers basic knowledge required for printed organic electronics and its application within printed electronics. Special attention is devoted to understanding of electrical properties of materials suitable for application, topography of prints and requirements suitable for the final application. The measuring methods for analysis of materials (printing substrates and functional printing inks), process and performance

of final product are given. The course includes discussing of applications according to the research of the student.

### **T-S-5 COLOUR MODELS AND COLOUR TRANSFORMS: 10 ECTS**

Lecturer ■ [Dejana Javoršek](#)

The course considers mathematical models (matrix, CLUT) and methods for colour transforms between different colour spaces used in the field of cross media publishing. The student will be able to apply his knowledge in the field of capturing, displaying and colour reproduction for different viewing and surround conditions. He will also be able to take into account changes due to change in printing materials, inks and printing technique. Exact course will take in consideration student interests. Other goal is also obtaining the knowledge of the colour transform corrections from device space to CIELAB and CIEXYZ.

### **T-S-6 THEORY OF COLOUR: 10 ECTS**

Lecturers ■ [Dejana Javoršek \(coordinator\)](#), [Dušan Kirbiš](#), [Darko Slavec](#)

The course considers colour theory, the expression and use of different colour configurations in both analogies, contrast or colour combinations according to the principle of the golden ratio, colour induction, colour transformations, colour strength and coloured body. Students obtain knowledge about colour and light intervals, the relationship between colour and shape, spatial, psychological and symbolic effects of colour. Students obtain additional skills in the use of colour in art, textiles, clothing, graphic and interactive design. Students learn the importance of colour in graphic design, phenomena that influence the perception of colours, colour patterns digitization and the importance of colour management.

### **T-S-7 DESIGN OF EXPERIMENTS AND MULTIVARIATE ANALYSIS METHODS IN GRAPHIC ARTS AND TEXTILES: 10 ECTS**

Lecturer ■ [Aleš Hladnik](#)

The goal of the course is an extension of statistical way of thinking and approach to research that students encounter during their graduate and postgraduate studies. Students become familiar with modern statistical methods as well as with the appropriate software and web tools they will use at their R&D or professional work. The emphasis is on understanding the basic ideas of the design and analysis of experiments and of the multivariate statistical analysis as well as on solving real-world engineering problems in the areas of graphic arts or textiles.

### **T-P-1 FIBRE FORMING POLYMER STRUCTURE: 10 ECTS**

Lecturer ■ [Tatjana Rijavec](#)

The course enables the acquisition of general and specific knowledge in the field of fibre polymers for the needs of product development. The structural morphological hierarchy of fibre polymers is presented. The relationship between structure and properties which is the foundation of the understanding of the polymeric materials behaviour is explained. The course covers studies of the fibre-forming polymers structure in non-oriented and amorphously crystalline state, and the changes resulting from the deformation. Study of the superstructure of oriented fibre-forming polymers

and the interdependence between the structure and properties allows the understanding the behaviour of fibres in end products.

## **T-P-2 STRUCTURE AND PROPERTIES OF TEXTILES - SELECTED TOPICS: 10 ECTS**

Lecturers ■ Alenka Pavko Čuden (coordinator), Krste Dimitrovski, Matejka Bizjak, Dunja Šajn

Within the course, the impact of properties of textile materials, technological parameters and production processes on structural, textural, mechanical-physical and rheological properties of yarns, woven fabrics, knitted fabrics and nonwovens is analysed in-depth. The course deals with complex existing applications and trains for the development of new applications. It transmits knowledge needed to design textiles with a pre-requisite structure and properties and for selecting the optimal and most cost-effective technologies for the production of textile structures.

## **T-P-3 SPECIALITY FIBRES - SELECTED TOPICS: 10 ECTS**

Lecturer ■ Tatjana Rijavec

The course includes studies of different types of unconventional natural fibres such as vegetable fibres, wild silk, animal hair, and specialty chemical fibres, which include micro-fibres, nano-fibres, profiled, bi-component, antistatic, antibacterial, smart and high performance fibres. The emphasis is on understanding different ways of modification of fibre morphology and training for the proper professional selection of specialty fibres for the development of advanced and unique products with special properties for various interdisciplinary applications.

## **T-P-4 THEORY OF FINISHING PROCESS: 10 ECTS**

Lecturers ■ Barbara Simončič (coordinator), Petra Forte Tavčer

The course includes theoretical bases of textile finishing which supplements the courses in the field chemical textile technology. It enables insight into the influence of fibre and dye structures on the dyeing process, thermodynamics of dye sorption, diffusion and rate of dyeing, relationship between dye and fibre, interactions between dyes and auxiliaries, chemical reactions in dye-bath, action of oxidizing and reducing agents to fibres, enzymatic catalysed processes, rheology of media, wetting and wicking of textile surfaces, processes at solid-liquid interface, models and methods for determining the surface free energy components.

## **T-P-5 GENERATING AND PROCESSING INFORMATION IN GRAPHIC MEDIA - THE MESSAGE OF GRAPHIC MEDIA: 10 ECTA**

Lecturer ■ Helena Gabrijelčič Tomc

The course enables the study of elementary and advanced methods for generating and processing information in different graphic media. The study of communication in graphic media involves a theoretical basis about the activity and effects of different media and the possibilities for their use, as well as analysis of the effects of messages in different media. The aim of the course is to give basic and advanced knowledge about generating data, which are significant and influential on all human senses only as information in graphic media. The second aim is the study of information process-

ing in light of major sensory structures (visual, auditory), which enables knowledge of different graphic elements, their communication through different media and their responsibility in social contexts.

### **T-P-6 VISUAL IMAGE AS A COMMUNICATION MEDIA: 10 ECTS**

Lecturers ■ Klementina Možina (coordinator), Darko Slavec

In this course thoroughly studied how to notice, realize, understand, explain, describe and critically judge visible and hidden, compositional, aesthetic and communicative (positive and negative) characteristics of graphic work, starting from artistic analysis in connection with understanding and synthesis to the creation of new graphic work and visual communications in the civilized world. The work consists of informatization in basic and specific high sensitivities in the observation and evaluation of civilizations' use of graphic design and design-graphic visual systems, for the function of communication between creator and user.

### **T-P-7 INTERDISCIPLINARY TYPOGRAPHY: 10 ECTS**

Lecturer ■ Klementina Možina

This course gives in-depth study of the influence of technological development on typography: various conventional and contemporary printing techniques, various media; role of various information carriers on typographic choice. Detailed knowledge about the influence of historical periods and artistic styles on typography is given. In-depth research of visibility, legibility and readability – their importance and role in presenting various types of texts in various media; investigation and use of appropriate research methods for their verification are thoroughly studied.

### **T-P-8 ADVANCED PRINTING TECHNOLOGIES, DEVELOPMENT AND APPLICATIONS: 10 ECTS**

Lecturer ■ Tadeja Muck

The course presents selected topics in the field of printing technologies including 3D printing. The key parameters for each of these technologies which affect the optimal run ability, printability, productivity and economy are presented. The course introduces also a hybrid printing and the possibilities that are enabled mainly on the field of printed electronics. At 3D printing knowledge about printing technologies and the key parameters that determine the final quality of the printed object is gained.

### **T-P-9 INTERACTIVITY: 10 ECTS**

Lecturers ■ Aleš Hladnik (coordinator), Matevž Pogačnik

The course covers the fundamental knowledge necessary for an understanding of the field of interactivity and gives a systematic overview of the trends in interactive communication in new media. A student will get a deeper understanding of the terms such as multimedia, user interfaces, user experience, human-computer interaction, multimodal and multi-sensorial interfaces, user modelling and information systems. The course also comprises an overview of procedures in prepress and processing of multimedia content that enable execution of user-centred interactive services.

## **T-P-10 SELECTED ISSUES IN SOCIOLOGY OF THE ARTS: 10 ECTS**

Lecturer ■ Aleš Debeljak

The course focuses on the critical-historical presentation of the main features of modernity. Some of the relevant stages in the development of stylistic formations in modernity, including romanticism, realism and symbolism, will be critically unpacked. Based on this knowledge, the students gain an analytical view of European modernism and historical avant-gardes and position of art which has retained its autonomous form, but has been substantially integrated into the circuits of global capitalism and its attendant "multicultural logic".

## **T-P-11 THEORY OF TEXTILE AND FASHION ART: 10 ECTS**

Lecturers ■ Marija Jenko (coordinator), Elena Fajt

Course deals with social criticism and formalism, the (un)culture of living and other phenomena in society that concern, mark and transform textile and fashion. It points out the importance of meaning of textile and fashion in the sphere of art, and of understanding sociological, psychological and ethical consequences of artistic interferences in different cultural environments. Students are stimulated to develop conceptual thinking through interdisciplinary views to connect different disciplines and media of their expression. They begin to research the phenomenon of the »hollow body«, performance, art market and the influence of communication technologies and scientific development in textile and fashion art.

## **T-P-12 THEORY OF FASHION: 10 ECTS**

Lecturers ■ Almira Sadar (coordinator), Elena Fajt

Course consists of profound study of different fashion theories and specific methods of the clothing design, related to sociological, psychological and historical backgrounds of main functions and motifs of clothing. It especially points out the connections between fashion and other fields of design and in focuses on study of the relations between body and clothes. It encompasses the understanding of fashion as the complex system of signs of social life. It includes the field of production and consumption of fashion, socio-psychological interpretations of public and personal, relations between the fashion and identity, ideology etc.

## **T-P-13 STRUCTURE OF ART PRACTICE: 10 ECTS**

Lecturers ■ Jožef Muhovič (coordinator), Dušan Kirbiš, Darko Slavec

The course deals with important issues related to artistic productive thinking, conceptualisation, articulation, materialization, and public presentation. It deals with theoretical and expression issues relating to several branches of art in historically important development turns of the modernist styles. It defines linguistic features and impacts of new artistic media - photography, film, video, digital techniques and practices, etc. – on design. It enters the field of aesthetics and makes comparisons with other artistic practices. It investigates the structure of the artistic language and explores the relations between subject, structure and substance, and ends with the presentation and verification of the effect in a public space.

## **T-P-14 CULTURAL STUDIES OF FASHION: 10 ECTS**

Lecturer ■ Peter Stanković

The course addresses fashion from the perspective of cultural analysis. Fashion is in this context understood as a unique signifying system, in which several social relations are inscribed in: from economic, gender and sexual to ecological and political. In order to understand all these, students are firstly acquainted with the most important systems of theoretical explanations: Marxism, post-Marxism and post-structuralism, as well as the school of so-called British cultural studies. Course explores various concrete aspects of fashion, including topics as: fashion and modernity, fashion and relations of social power, fashion and construction of gender and sexual identities, fashion as spectacle, and fashion as an expression of dichotomies of the contemporary individual.

## **T-P-15 THEORETICAL FOUNDATIONS OF TEXTILE DESIGN: 10 ECTS**

Lecturers ■ Marija Jenko (coordinator), Alenka Pavko Čuden

Course supports interdisciplinary research work, oriented toward innovative solving of different textile problems, and toward adequate valuating of textiles and their positioning into wider civilizational/cultural space. It defines and systematizes crucial theoretical elements in textile design, educates in the field of semiotics of textiles and in the understanding of complex relations between artistic elements and the identity of textile materials. It stimulates individual expression together with technological innovations of industrial production, and develops ecological awareness and all-encompassing integration of textiles for the needs of different disciplines.

## **T-P-16 THEORY OF COSTUME DESIGN: 10 ECTS**

Lecturers ■ Almira Sadar (coordinator), Elena Fajt, Karin Košak

Course includes profound knowledge from costume-design studies, of specific methods of designing costumes for different types of shows, and of history of the theatre, drama, scene design and costum design. It upgrades the knowledge of the role of costume design and its determinants in theatre, opera and dance performances and in film, television and video. It focuses on the integration of costume design in dramaturgic, directory and scenic concept of the performances from the 1980s on. It defines the relation between fashion and design through the history and in the present times, and it shows contemporary costume-design approaches of the world most renowned costume-designers.

## **Short presentation of elective courses**

### **I-S-1 ENVIRONMENTAL ASPECTS IN TEXTILES AND GRAPHICS: 10 ECTS**

Lecturers ■ Petra Forte Tavčer (coordinator), Maja Klančnik

The course includes the study of environmental legislation, impact of production processes, services, materials, wastes and products on environment, environmental protection solutions, environmental monitoring, industrial wastewater treatment, decolourisation of effluents, waste management, processing and recycling of wastes of textile and graphic industry and their final products, toxic chemicals in textile and

graphic industry as well as legislation on chemicals. Environmental management systems are presented. Development of ecological products and environmental labels is discussed.

### I-S-2 QUALITY - SELECTED TOPICS: 10 ECTS

Lecturer ■ Andrej Demšar

The main objective of the course is to develop the critical evaluation capability of quality management systems and procedures for constant quality improvement. Modern methods of quality management are discussed on the basis of critical analysis of practical examples. The importance of quality in order to achieve business excellence of the organization is emphasized. Different procedures for quality management (ISO 9000 family of standards, QFD, Kaizen, lean manufacturing, TQM, Taguchi methods, six sigma, 20 keys, etc.) are presented and critically evaluated.

### I-S-3 ANALYSIS OF STRUCTURE AND PROPERTIES OF TEXTILE AND GRAPHIC MATERIALS - SELECTED CHAPTERS: 10 ECTS

Lecturers ■ Andrej Demšar (coordinator), Diana Gregor Svetec

The main objective of the study is to develop the capability of critical application and evaluation of modern analytical methods for the analysis of structure and properties of textile and graphic materials which are almost all polymeric materials. Some structural properties and methods which student will study in the frame of the course: molecular mass, distribution of molecular weight, surface morphology, anisotropy, thermal properties, diffusion phenomena, viscoelasticity, mass density and others. Some of these methods are more thoroughly studied in connection with students' research work.

### I-S-4 RECYCLING OF POLYMERIC MATERIALS: 5 ECTS

Lecturer ■ Diana Gregor Svetec

The topic of course is environmentally responsible development and treatment of textiles and graphic products. Students gain some knowledge about polymeric materials that are used in the textile, graphic and packaging industry, as well as about their structure and properties that are connected to degradation and recovery of polymeric materials. Students learn about different processes of sorting solid polymeric waste and recycling technologies for polymeric materials, and about the influence of recycling on the properties of polymers. Information about the life-cycle of polymeric textile and graphic products is given, with the goal to optimize ecological design of these products.

### I-S-5 PLASMA TECHNOLOGIES FOR TEXTILES AND GRAPHICS: 10 ECTS

Lecturers ■ Marija Gorjanc (coordinator), Miran Mozetič

The course enables the insight into the theoretical basis and application of low temperature plasma for functionalization of textile and graphic materials. It includes the overview of state of the art in the field of plasma modification of textile and graphic materials, the basis of non-equilibrium state of gas, characteristics of discharges, reactive gaseous particles in plasma, interaction between plasma radicals and materials

and functionalization and etching of materials. Characterization of textile and graphic surfaces by X-ray photoelectron spectroscopy, atomic force microscopy and scanning electron microscopy was presented. Ageing of plasma treated materials is also discussed.

### I-S-6 PRINTED ELECTRONICS: 10 ECTS

Lecturer ■ Tadeja Muck

The course connects the knowledge of printing technology with the attainment of the course

Principles of electronics for application in printed electronics. In the frame of the course first experiences in the field of printed electronics, which are necessary for the application of such systems in practice are acquired. Special attention is devoted to existing printed electronic applications and to search for new innovative solutions for simple printed passive and active elements of electric circuits and their final applications.

### I-S-7 DYES AND PIGMENTS IN TEXTILE AND GRAPHIC TECHNOLOGY: 5 ECTS

Lecturers ■ Sabina Bračko (coordinator), Mateja Kert

The course considers selected topics regarding dyes and pigments used in textile and graphic arts technology. In introduction, basic explanation for understanding the relationship between chemical composition and colour of substance is given. Relevant dye classes, their structure, properties and novel technological dyeing processes as well as properties of pigments as a component of printing ink are discussed in detail. Within the course, the knowledge about novel photochromic, thermochromic and electrochromic dyes and pigments is gained. Special attention is dedicated also to the ecological and toxicological problems of dyes and pigments.

### I-S-8 MICROCAPSULATION: 5 ECTS

Lecturer ■ Bojana Boh Podgornik

The course deals with the development of microencapsulation technologies. Physical methods of microencapsulation and chemical methods of microencapsulation in the emulsion systems: emulsification, simple and complex coacervation, interfacial polymerization, in situ polymerization are presented. Isolation and drying of microcapsules, testing and analytics of microcapsules, formulations and applications of microcapsules in added value products, as well as uses of microcapsules in textiles and graphic communication are discussed.

### I-S-9 COLOUR MEASUREMENT - SELECTED TOPICS: 5 ECTS

Lecturers ■ Sabina Bračko (coordinator), Marija Gorjanc

The course considers selected topics in the field of colour measurement. In introduction, the causes for colour formation are explained. A detailed knowledge and understanding regarding colour measurement regulations given by the International Commission on Illumination (CIE) is obtained within the course. Colour spaces, theories of colour vision and colour appearance models as well as regulations concerning dyed material preparation are discussed in detail. Standard methods for numerical assess-

ment of colour and equations for colour difference evaluation are studied on the basis of practical research work.

### **I-S-10 MODERN ANALYTICAL TECHNIQUES IN GRAPHIC AND TEXTILE TECHNOLOGY: 5 ECTS**

Lecturer ■ Franci Kovač

Candidates are acquainted with the basic principles of modern analytical techniques and the practical choice and use of these techniques in research work in the field of graphic and textile technology. It includes a study of the transformations of substrates in real samples, separation methods and use of these techniques in research work, comparison of classical and modern instrumental methods and their possible use in real samples, identification and characterization of real samples in real matrices with UV/VIS and IR spectroscopy, GC/MS, HPLC, NMR.

### **I-S-11 COMPUTING AND NUMERICAL METHODS IN TEXTILE AND GRAPHICS RESEARCH: 5 ECTS**

Lecturers ■ Alojz Suhadolnik (coordinator), Aleš Hladnik

The course goal is to give students knowledge on programming and numerical methods with an emphasis on textile and graphic arts problematic. Students acquire skills of independent research work using mathematical programming packages for the analysis of measured data, digital image processing, etc. Work with tools for digital data processing and digital image acquisition, as well as some samples in textile and graphics research are included.

### **I-S-12 PHOTOGRAPHY AS A COMMUNICATION MEDIA: 5 ECTS**

Lecturers ■ Marica Starenšič (coordinator), Darko Slavec

The goal of the course is to describe and critically judge visible and hidden, compositional, aesthetic and communicative characteristics of photography, starting from artistic analysis and synthesis, to the creation of new independent photographic work, based on visual photographic solutions with variations on a selected theme, problem or motif. Specific and high sensitivities in individual observation and valuation of the novel use of photographic visual systems in the role of a communication medium. Understanding analytical coordination between contemporary and classical approaches, development of original and recognized solutions and communication specialities required by contemporary moments in civilization, as well as professional production.

### **I-S-13 DESIGN AND INNOVATION: 5 ECTS**

Performers ■ Marija Jenko (coordinator), Karin Kosak

Course aims to provide foundation knowledge of the complexity of the design, which represents the connection of creator's idea, industrial realization, distribution network and consumer needs. It introduces procedures, methods and criteria for evaluating the quality of the design phase and later in the conversion of ideas into concepts and models. Students learn methods to identify the needs of potential users and learn to use tools to stimulate creativity. They get acquainted with the methods for testing prototypes with experimental and analytical methods as well as the ability to produce patent applications.

## **I-S-14 ADVANCED TECHNOLOGIES IN CLOTHING WITH SELECTED TOPICS OF 2D/3D DEVELOPMENT OF GARMENT CUTS: 10 ECTS**

Lecturer ■ Matejka Bizjak

The subject critically reviews advanced technologies in clothing industry which also include seamless technology, and advanced systems for the management and control of clothing production. Advanced systems for the preparation and construction of garments, and systems for the simulation of the final product and prediction of the properties of the final product, which include draping, elastic properties, the forming ability, etc ... are presented. The course includes traditional and computer-aided 2D/3D clothing anthropometrics. Students acquire an in-depth theoretical and practical knowledge of 2D/3D development of garment patterns and the possibility of a new approach to the design of structural and functional relationship between clothing (textiles) and the body.

## **I-S-15 USE OF IMAGE PROCESSING AND IMAGE ANALYSIS IN GRAPHIC AND TEXTILE RESEARCH: 10 ECTS**

Lecturers ■ Aleš Hladnik (coordinator), Tadeja Muck

Goal of the course is to provide a student the fundamental knowledge about the modern theory and practice of image processing and analysis. The student will learn the most common digital image processing procedures, such as point-wise and local operations, image transformations, morphological filtering and colour image processing routines. He will also become familiar with various software tools used in the field. With the acquired knowledge he or she will be able to solve a variety of problems encountered in research and/or industrial settings in papermaking, graphic technology, textile science and elsewhere.

## **I-S-16 THE METHODOLOGIES OF COMPUTER-AIDED DESIGN OF PRODUCTS: 10 ECTS**

Lecturer ■ Helena Gabrijelčič Tomc

The course is focused on the study of methodologies of computer-aided design and prototyping products. The study includes both design and technological aspects of producing and processing bitmap and vector images and graphics as well as methods of creating patterns by repeating. With the involvement of processing and analysis of two-dimensional and three-dimensional content, the elimination of semantic elements from digital media and the transformation of the contents in a new significance with the aim of further use in computer aided design of different products is considered. Besides prototyping the course is oriented in the study of setting of various content and products in the space/time and the creation of static and dynamic presentation of computer-designed products.

## **I-P-1 FUNCTIONALIZATION OF TEXTILE MATERIALS: 10 ECTS**

Lecturers ■ Barbara Simončič (coordinator), Marija Gorjanc, Petra Forte Tavčer, Brigita Tomšič, Tatjana Rijavec, Živa Zupin

The course includes a review of contemporary chemical and mechanical technologies of textile functionalization. The processes are studied in relation to the chemical

structure of fibres, constructional parameters of fabric. The functionalization of synthetic fibres with organic and inorganic additives in the process of fibre spinning and the use of applied techniques of functionalization in different processes of textile finishing are presented. A review of chemical agents for textile functionalization, standard methods for determining functional properties of textile fibres, and contemporary analytical methods for determining morphological, physical and chemical changes in fibres after functionalization is performed.

### I-P-2 BIOTECHNOLOGY FOR TEXTILE PROCESSING: 10 ECTS

Lecturers ■ Petra Forte-Tavčer (coordinator), Bojana Boh Podgornik

The course includes a study of different biotechnological processes in the production of textile and other fibreous substrates. Students get knowledge of the basic enzymology, classification of enzymes, structure and properties of proteins, enzymatic catalysis, enzyme activity and stability, basic thermodynamics and enzyme kinetics, industrial enzymes, sources and production of enzymes, handling enzymes, biotechnological processes in finishing textiles and industrial applications. Enzymes for textile care, micro-organisms and enzymes for decolourization and enzymes in bleaching are presented. Biotechnology in the development of new fibres and the genetic modification in the production of new natural fibres are discussed.

### I-P-3 ADVANCED TECHNOLOGIES FOR LINE TEXTILES PRODUCTION – SELECTED TOPICS: 10 ECTS

Lecturers ■ Dunja Šajn Gorjanc (lecturer), Stane Praček

Selected material provides an in-depth theoretical and technological expertise in the manufacture of twisted, core and advanced yarns, where their structure and properties are emphasized. Within the course frame, factors influencing the design, structure and properties of yarns are presented and analysed in detail. Classical technological processes of yarn manufacture are discussed, with an emphasis on advanced technologies of yarn forming. The impact of advanced spinning process on the properties, productivity and cost price of yarns is presented.

### I-P-4 ADVANCED TECHNOLOGIES IN CLOTHING – SELECTED TOPICS: 10 ECTS

Lecturers ■ Alenka Pavko Čuden (coordinator), Krste Dimitrovski, Matejka Bizjak

The aim of the course is to explore new approaches in textile machine building and their limitations. Automation, robotics and computerization of production lines which allow the dismissal of bottlenecks in the manufacture of textiles are presented. Advanced technologies of flat textiles manufacture, specific technologies of mechanical after-treatment of textiles, modern systems for sample preparation and advanced control systems of manufacturing processes are presented. The course is aimed to qualify students for the scientific approach to the selection of cost-effective technologies for production of various textiles, and to design innovative textiles for specific purposes.

## **I-P-5 DYEING AND PRINTING OF TEXTILES – SELECTED TOPICS: 10 ECTS**

Lecturers ■ Petra Forte Tavčer (coordinator), Mateja Kert, Marija Gorjanc

The course covers the most contemporary topics in the field of textile printing and/or dyeing. Students get knowledge of the theory of dyeing, physical-chemical properties of dye solutions, rheological properties of thickeners and inks, colour reception, textile materials and auxiliaries, fixation of dyes and functional agents on textile substrates, finding the most appropriate process from the aspect of dyed material fastness, ecology of technological phases as well as of water outlets. Special printing techniques, printing of demanding materials, printing for functionalization and transfer from digital to screen printing are discussed. Analytical methods for the material characterization and the determination of high-level quality demands are upgraded.

## **I-P-6 PRETREATMENT AND FINISHING OF FIBROUS SUBSTRATES - SELECTED TOPICS: 10 ECTS**

Lecturers ■ Brigit Tomšič (coordinator), Barbara Simončič, Petra Forte Tavčer

The course includes intensively study of the most contemporary pretreatment and finishing processes of fibrous substrates. Pretreatment of unconventional natural and synthetic fibres and their mixtures is investigated. The influence of chemical treatment conditions on the properties of substrates is analysed. The most novel analytical techniques for the characterisation of the modified substrates are presented. Alternative bleaching agents, biocatalysts in oxidation processes and the influence of catalysts and activators on oxidation processes are studied. The relation between the chemical structure and functionality of the finishing agents, interactions between the agents and the substrates as well as the sol-gel technology are discussed.

## **I-P-7 TEXTILE CARE – SELECTED TOPICS: 5 ECTS**

Lecturers ■ Mateja Kert (coordinator), Barbara Simončič

The course covers theoretical approaches of different processes of the textile care and their sustainability. Students intensively study the theory of wetting and washing, mechanisms of surfactants in aqueous and non-aqueous media, surfactant-soil-fibre interactions and the appropriate analytical method for the evaluation of textile care processes. An overview of modern agents for textile care and of contemporary textiles and possibility of their care is presented. Textile care processes are studied from the economic and ecological point of view. European and global guidelines of textile care processes are discussed.

## **I-P-8 SPECIALITY TEXTILES- – SELECTED TOPICS: 5 ECTS**

Lecturers ■ Matejka Bizjak (coordinator), Alenka Pavko Čuden, Tatjana Rijavec

The course provides specialist knowledge of the structure and geometry of 2D and 3D textiles for agronomy, filtration, construction, aviation, medicine, sport and leisure. Advanced structural, geometric, mechanical, comfort and other specific characteristics of these textiles are presented and analysed. The impact of raw materials, structural and manufacturing parameters on the final properties of specialty textiles is critically discussed. In addition to mastering the existing fields of application, the students are qualified to plan and find new applications.

## **I-P-9 ANCIENT GRAPHIC MATERIALS AND TECHNIQUES – SELECTED TOPICS: 10 ECTS**

Lecturer ■ Jedert Vodopivec Tomažič

In this course the ancient graphic printing materials and techniques of manufacturing written and printed graphic products in different periods of time are presented. The aim of the course is to present the necessary knowledge for a professional to understand the selection and quality of materials and techniques used in the past in the field of graphic art, craft, manufacture and industry. These topics are necessary to solve complex advanced research tasks and to plan and implement projects which are in direct or indirect relation to the graphic cultural heritage.

## **I-P-10 SUSTAINABILITY AT PRODUCTION AND PROCESSING OF PAPER AND PACKAGING: 10 ECTS**

Lecturers ■ Diana Gregor Svetec (coordinator), Branka Lozo

In this course paper, board and packaging are presented from sustainability viewpoint. An overview of current situation in this field is given. Knowledge is gained about biopolymers and other ecological materials; environmental friendly processes of manufacturing, finishing and re-processing of paper and packaging; testing methods for functionality evaluation and tools for evaluation of printed products and packaging sustainability; planning and eco-design of packaging according to sustainability. Selected topics are chosen according to individual research work of student.

## **I-P-11 PACKAGING AND GRAPHIC MATERIALS – SELECTED TOPICS: 10 ECTS**

Lecturers ■ Diana Gregor Svetec (coordinator), Sabina Bračko

In this course, special topics from the field of graphic materials used for manufacturing printed products and packaging, interactions between different graphic materials, manufacturing processes of printed and packaging products, characterization of materials and products are thoroughly studied. Based on the knowledge of structure and properties of graphic and packaging materials, manufacturing processes, finishing of printed products and packaging the knowledge needed for the development of new products or improvement of existing printed products and packaging is gained.

## **I-P-12 METHODS FOR STUDYING OF MATERIAL – PRINT INTERACTIONS: 10 ECTS**

Lecturers ■ Tadeja Muck (coordinator), Aleš Hladnik

In the frame of the course the knowledge about instrumental methods that allows objective evaluation of material-print interaction is obtained. The course is oriented towards knowledge and understanding of interactions between the surface of printing materials, coatings, printing inks, glues, varnishes and other liquid materials. Presentation and purpose of using different methods from other research areas (SEM, CLSM, AFM and others) are included for better understanding of complex problems in graphic applications.

## **I-P-13 QUALITY ANALISYS OF GRAPHIC DESIGN PRODUCTS: 5 ECTS**

Lecturers ■ Klementina Možina (coordinator), Darko Slavec, Helena Gabrijelčič-Tomc  
The goal of this course is employment with in-depth aesthetic analysis of problems of graphic design and user experience and their connection among artistic theory, design process and final production of graphic products in different media. Aesthetic, psychological and usability function of typography, photography, moving image and correct coordination among them are discussed. Course also includes defining protocols for quality testing regarding user goals and specifications of graphic and interactive media.

## **I-P-14 TEXTILES IN SPACE: 10 ECTS**

Performers ■ Marija Jenko (coordinator), Matejka Bizjak, Karin Košak

The course is closely related to industrial design, interior design, landscape architecture, construction, fine art and textile technology. The emphasis is on the development and design of fabrics for interior and exterior use through understanding and appreciation of architectural rules and significance in the historical and broader cultural context. When creating a new demand for modern and unique serial production, separation of public and private in organic approach takes into account the important role of textile technology, not ignoring the role of other interdisciplinary skills.

## **I-P-15 ADVANCED MATERIALS IN TEXTILES: 10 ECTS**

Lecturers ■ Tatjana Rijavec (coordinator), Sabina Bračko, Milan Bizjak, Marjan Jenko

The course deals with active smart textiles and wide possibilities of their use, and integration of biotechnology, information technology, microelectronics, microelectromechanical devices as well as with the development of portable computers and nanotechnology. Students are introduced to fundamental physical-chemical principles of operation of smart textiles and the ability to plan and design new products, including smart textiles. Acquired knowledge of advanced materials enables collaboration and communication with experts in various disciplines.

## **IP-16 GENDER STUDIES, BODY AND CLOTHING: 10 ECTS**

Performers ■ Alenka Švab (lecturer)

The course presents the main theoretical perspectives and study topics of gender, body and dress with the basics of epistemology and methodology of research specific to this area. It encourages critical view of sexual relationships, sexual construction of the body, clothing and fashion and related social phenomena and their placement in a variety of institutional, political, social, economic and aesthetic explanatory frameworks. It defines sexual construction of clothing and fashion, cultural and gender stereotypes, gender socialization through dressing, the relationship between clothing and nudity.

## **I-P-17 FASHION AND MEDIA COMMUNICATIONS: 10 ECTS**

Performers ■ Maruša Pušnik (lecturer)

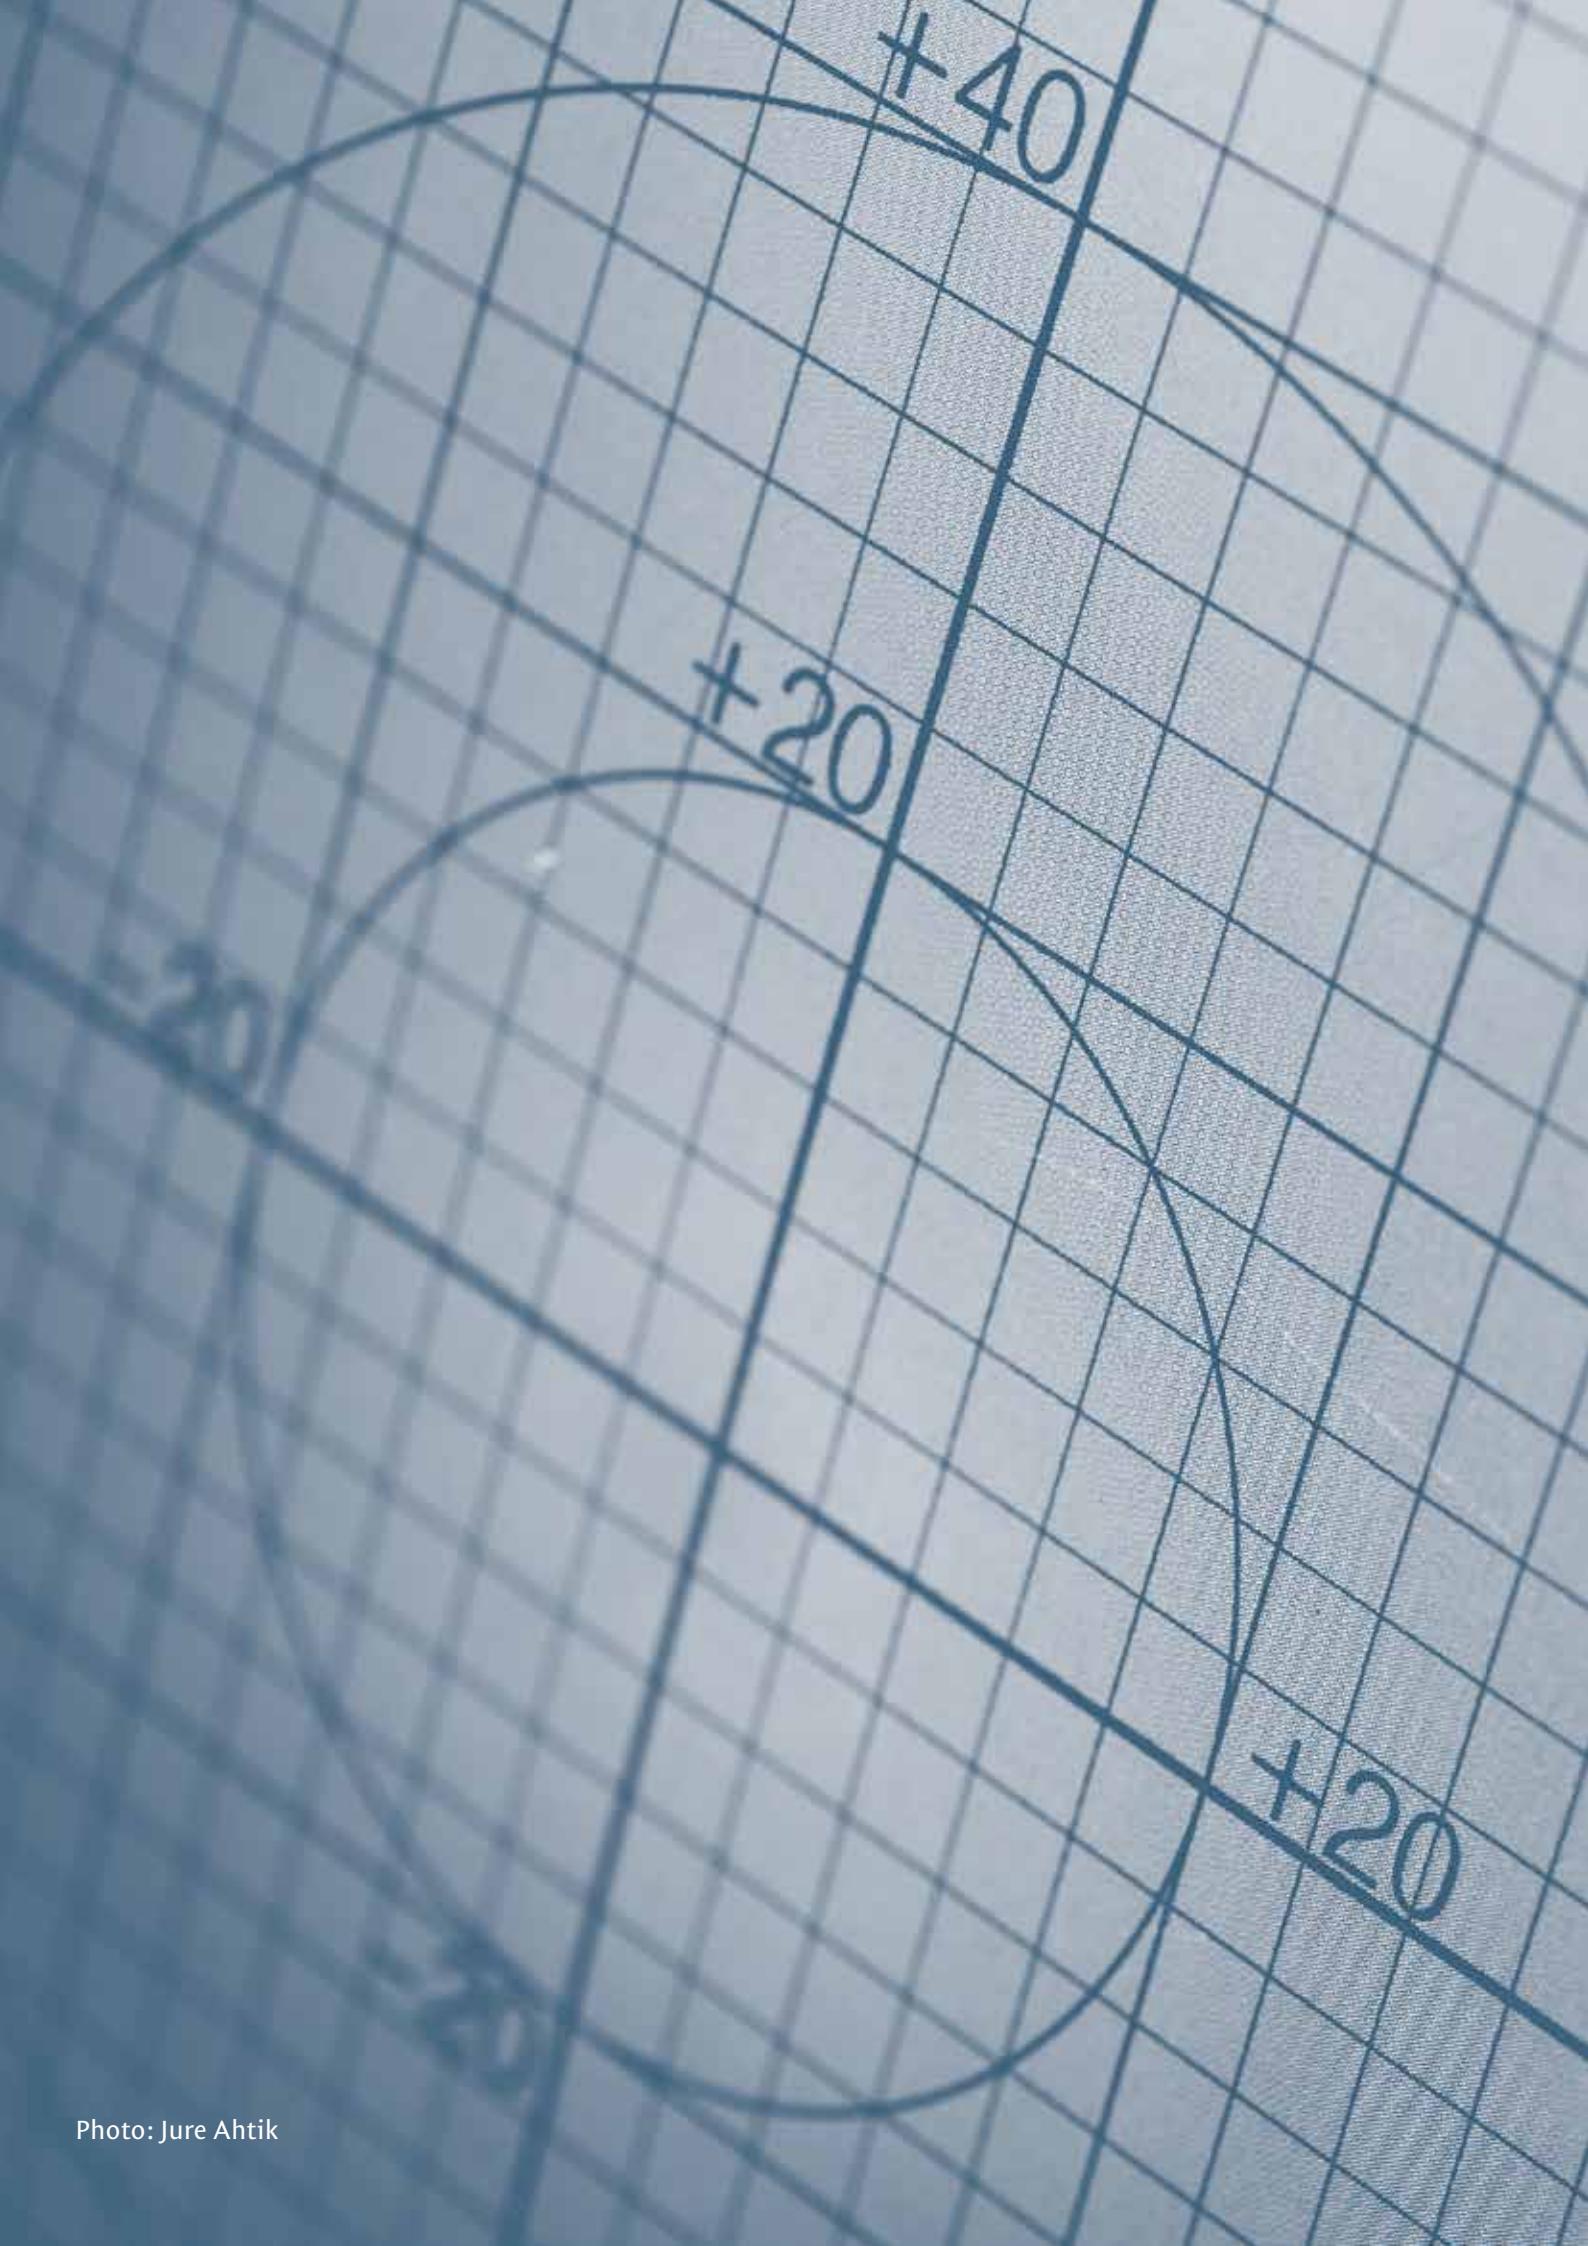

Course treats communication 'skills to operating media culture in connection with fashion industry, presents role of the media in promoting and structuring of fash-

ion in the contemporary world and outlines the importance of marketing communications and advertising for changing fashion tastes. Students gain an insight into the history and development of media, consumer and popular culture. They learn about creating fashion campaigns in the media, the method of selection of the necessary information for the promotion and communication of fashion, with the presentation of fashion brands in the visual and textual meaning, with the media industry and fashion as a communication network in contemporary society.

### **I-P-18 SUSTAINABLE DESIGN: 10 ECTS**

Performers ■ Almira Sadar (coordination), Marija Jenko, Elena Fajt

Course aims to provide an in-depth theoretical knowledge in the field of sustainable design and understanding of sustainable design models with an emphasis on innovative design methods and concepts based on the social aspects of sustainability. It presents the various fields of sustainable design with an emphasis on the material and social aspects of sustainable design. It opens the students a comprehensive understanding of sustainable design models and methods, which are based on a combination of ecological and ethical principles.
