Environmental study of Slovenian and German peat bogs

4. 11. 2019, at 14.36, written by ines.vidmar

Geoscientists of the University of Ljubljana, Institute Jožef Stefan and the TU Clausthal initiated an environmental study of peat bogs in the Slovenian Alps and the Harz Mountains. The Sphagnum mosses of peat bogs are thought to get their nutrients mainly from atmospheric inputs. Therefore, they can be used as bioindicators to evaluate the anthropogenic ... [Read more](#)
